PRESS RELEASE

01/23/2019

For Immediate Release

ALTO Aviation introduces new 2019 ALTO Cabin Management System upgrade programs exclusively designed for legacy Gulfstream GIV and GV aircraft.

ALTO Aviation has introduced their new 2019 Cabin Management System upgrade programs exclusively designed for the legacy Gulfstream GIV and GV aircraft. These programs are based on budget friendly solutions, by creating direct fit compatible switch solutions to replace the former legacy Pacific Systems / Airshow systems.

These upgrades include direct replacement and fit compatible solutions designed to preserve your wood and furnishing, and to serve all styles, including the Micronet round, squared, raised oval button, and the concave curved side ledge panels.

ALTO new 2019 upgrade programs have a modular approach which allows to easily scale the solutions to meet each aircraft exact requirements. Scalability allows customers to pay only for what they need, resulting in significantly lower costs. Our solutions adapt to each customer's budget, allowing to retain existing composite bulkhead monitor even with HD sources, or integrating legacy personal monitors if desired.

ALTO new 2019 solutions make it very easy to remove headphone functionality in the aircraft and replace with blanking plates, repurpose the panels with USB charging and/or add local Read-Table lighting to the former headphone locations, and eliminating the former PSU panels all within the constraints of the original panel. This simple design step eliminates nearly 40% of the existing panels, resulting in greater cost savings.

For situations where headphones are still needed for video viewing, ALTO's scalable headphone system can adapt to the number of seats required, an ideal solution for conference group and divan settings where watching a monitor without speakers is desired. As few as 2 headphones for personal use can be implemented, and it's ideal for arrangements where gaming is desired but not necessarily to be heard over the speakers. ALTO new Cadence Switch System has allowed the integration of aux input ports into VIP or entertainment cabinet panels, HDMI ports, and USB charging ports all within the same profile of the former switch cutout.

"The new 2019 ALTO Cabin Management System solutions for legacy GIV and GV aircraft allow us to meet the demands of our customer in a very budget friendly, modular approach. We pride ourselves in providing innovative solutions for these interior challenges." – Kevin Hayes, VP of Sales & Marketing said.

About ALTO Aviation

ALTO Aviation is an aerospace industry leader in the design and manufacture of high-end cabin audio & entertainment systems for all aircraft type in Business Aviation. Our products and solutions, which include Inflight Entertainment Systems, Public Address Systems, and Cabin Management Systems are sold to OEM and retrofit companies in the business aviation industry and installed in corporate/private/VIP jets and helicopters. ALTO also manufactures precision sheet metal and machined parts for multiple industries in addition to aerospace.

If you would like more information or would like to schedule an interview with one of our ALTO Aviation representatives, please contact Cristina Scarlata at cscarlata@altoaviation.com
