Premium Cabin Audio/Entertainment Solutions
for all aircraft in Business Aviation™

Gulfstream Audio System Upgrade Bose® Replacement Program

The Bose® Aircraft Audio System was OEM installed on the G-IV and G-V. The Bose® system is currently obsolete on the following aircraft serial numbers:

G-IV: SN's 1209 - 1405*
G-V: SN's 501 - 603*

Due to obsolescence, there are no alternatives from the OEM to repair or replace any of the system components. In an effort to provide a customer friendly update solution, ALTO Aviation has created the Gulfstream Bose® Replacement Program.

ALTO Aviation designs and manufactures premium cabin audio systems for the business class aircraft market. We are the OEM solution for the G650, G450/550 Elite Series and the G280. ALTO Aviation is also the preferred vendor for Gulfstream retrofit/upgrade programs.

ALTO Aviation offers a cabin audio replacement solution for the Legacy G-IV and G-V Bose® systems. It includes a direct fit compatible replacement enclosure for the Bose® PSU mounted midrange/high speaker, the ASP-401, using existing mounting provisions. Thesidewall legacy Bose® subwoofers are replaced with ALTO under seat enclosures, the ASW-279. Typically, two digital amplifiers, the DA-210AC, are added to drive these new speaker components. The amplifier contains a DSP Processor which allows full audio equalization customization per aircraft interior configuration.

This solution provides a significant audio improvement with components that can be serviced for years to come. ALTO Aviation components feature a limited 10 year warranty on speaker enclosures and a 5 year warranty on amplifiers.

Enjoy the highest performance audio system that only ALTO Aviation can truly deliver! Replace your obsolete Bose® system with the ease of fit compatible solutions for a superior sound experience sure to exceed your expectations. Contact ALTO Aviation today. It's audio designed with your aircraft in mind.

***Each aircraft configuration may vary slightly. Please consult wiring diagrams for current part numbers and definition.**
