Audio System Upgrade Solutions DX Acapella Series Headphone Amplifiers

ALTO Aviation has developed a series of small headphone distribution amplifiers. This new design supports headphone controls with built-in logic control with independent audio selection and volume control. The following derivatives are available with FAA TSO-C139a approval.

HA-006

6 Channel Headphone Amplifier with PA Override

The HA-006 is a 6 channel headphone distribution amplifier with independent audio selection and volume per passenger. The HA-006 may also be used as an audio selection module to provide up to 4 source inputs. 3 sources are available if PA audio override is required. PA override and trigger is available. ALTO Aviation headphone keypads are available for passenger interface.

HA-312

12 Channel Headphone Amplifier with PA Override

The HA-312 is a 12 channel headphone distribution amplifier with independent audio selection and volume per passenger. The HA-312 provides up to 4 source inputs. 3 sources are available if PA audio override is required. PA override and trigger is available. ALTO Aviation headphone keypads are available for passenger interface.

Variants of these headphone amplifiers may be integrated with the cabin audio amplifier into a single unit. Please reference the DX-145, DX-240 and DX-280 models.
